

Metaform DUO HD Prefabricated Joint Systems

Metaform Duo HD - the new variation of Duo in the Metalscreed range of products - specifically designed by request from Metaform users everywhere, basically the standard Metaform Duo, with 3mm thick wear strips affixed to the top of the joint, to cope with the demanding conditions of a heavily trafficked floor. These strips can be of brush or mirror finished Stainless Steel, Ultra High Strength Steel (as in the Eliminator), or even decorative metals such as Brass or copper.

The U.H.S. Steel version is suitable for those heavy duty areas where extra wear resistance is needed, and the Stainless Steel versions (any grade of stainless can be fitted) means that now the high specification Food and Pharmaceutical markets can enjoy the benefits of Metalscreed Duo joints, or any area where corrosion might be a problem. For those extra special projects that require custom materials, we can even fit brass, copper and Aluminium top strips, for when the aesthetic appearance of the exposed joint top strip is of prime importance.

- **Innovative design.**
- **Top wear strips can be abrasion resistant steel or stainless steel if required.**
- **Strong lightweight construction.**
- **Precision engineering manufacture.**
- **Heavy galvanised coating.**
- **Constructs floors to "Superflat" category.**
- **Provides steel armouring to joint arris.**
- **Accepts standard dowels and re-bar @ 300mm ctrs.**
- **Assists in resisting dowel burst out.**
- **Adjustable height and alignment.**
- **Range of easy and unique fixing methods.**
- **Quick, simple installation.**
- **Suitable for all types of concrete slabs.**
- **Ideal for use in Heavy Duty applications.**
- **Stainless Steel top strips make this joint suitable for the Pharmaceutical and Food Industries.**
- **135mm, 160mm, 185mm sizes available immediately from stock, these will suit up to 225mm deep slabs, other sizes by special order.**
